

One of these babies is more likely to develop coronary heart disease, stroke, diabetes, and chronic bronchitis in adult life. Find out why in Mothers, Babies and Disease in Later Life.

In this fascinating book David Barker tells the story of how he and his colleagues at the MRC Environmental Epidemiology Unit at the University of Southampton pieced together the evidence that the nutrition of the fetus and newborn infant has significant effects on its health in later life. For the first time, this exciting research is made accessible to the non-specialist, bringing the reader right up to date with the very latest findings.

This unique, readable account:

- Describes the scientific basis for the argument that improving the diet and health of young women will prevent coronary heart disease, stroke and diabetes in the next generation.
- Reviews the link between early infection and adult diseases
- Presents strategies for preventing disease in the future

PRESCRIBING INFORMATION

Presentations: Pulmicort Respules, (2ml single dose unit ampoules) containing 0.25mg/ml or 0.5mg/ml budesonide in a suspension for nebulisation. **Uses:** Bronchial asthma where use of a pressurised inhaler or dry powder formulation is unsatisfactory or inappropriate. **Dosage and administration:** Dosage schedules: Administer from suitable nebulisers. Dose delivered to the patient varies depending on the nebulising equipment used (see data sheet). Adjust dosage individually. Initially during periods of severe asthma and while reducing or discontinuing oral glucocorticosteroids the recommended dose in adults (including elderly and children 12 years and older) is usually 1-2mg twice daily. In very severe cases the dosage may be further increased. Children 3 months to 12 years: 0.5-1mg twice daily. The maintenance dose should be the lowest dose which keeps the patient symptom-free. Recommended doses are: Adults (including elderly and children 12 years and older): 0.5-1mg twice daily. Children (3 months to 12 years): 0.25-0.5mg twice daily. For an increased therapeutic effect increase dose of Pulmicort rather than combine treatment with oral corticosteroids because of the lower risk of systemic effects. **Contraindications, warnings, etc.:** Contraindications: Hypersensitivity to any of the constituents. Special warnings and precautions: Care is needed in patients with pulmonary tuberculosis and viral infections in the airways. A short course of oral steroids in addition to Pulmicort may be required in patients with excessive mucus in the bronchi. Transfer of patients dependent on oral steroids to Pulmicort demands special care: see data sheet for further details. The nebuliser chamber should be cleaned and dried after every administration. Pulmicort does not affect the ability to drive and use machines. Pulmicort Respules can be mixed with 0.9% saline and with solutions of terbutaline, salbutamol, sodium cromoglycate or ipratropium bromide. **Side-effects:** Mild irritation in the throat, coughing and hoarseness and oral candidiasis have been reported. In rare cases inhaled drugs may provoke bronchoconstriction in hyperreactive patients. Facial skin should be washed after use of the face mask as irritation can occur. Coughing can usually be prevented by inhaling a β_2 -agonist (e.g. terbutaline) 5-10 minutes before inhalation of Pulmicort Respules. Avoid in pregnancy. **Pharmaceutical precautions:** Store below 30°C. Use within 3 months of opening the foil envelope. Protect opened ampoule from light. Use within 12 hours of opening. **Legal status:** POM. **Basic NHS price:** Pulmicort Respules 0.25mg/ml (20 single dose units) £32.00. Pulmicort Respules 0.5mg/ml (20 single dose units) £44.64. **Product licence nos.:** Pulmicort Respules 0.25mg/ml PL 0017/0309. Pulmicort Respules 0.5mg/ml PL 0017/0310. **Name and address of Product Licence holder:** Astra Pharmaceuticals Ltd., Home Park, Kings Langley, Herts WD4 8DH.

ALSO AVAILABLE

Now supplied on disk and CD ROM for Windows, DOS and Apple Macintosh computers, the first issue for the 1995 subscription is now available.

This issue contains:

- Over 30 new Cochrane reviews relating to pregnancy and childbirth.
- 500 systematic reviews of interventions in pregnancy and childbirth from previous issues.
- The complete text of **A Guide to Effective Care in Pregnancy and Childbirth (2nd edition)**.
- Specialised register of controlled trials assembled by the Pregnancy and Childbirth Group.

Price per subscription (2 issues): Personal £70; Institutional £95 including VAT.

Edited by Iain Chalmers and Doug Altman.
This concise book:

- Explains what a systematic review is and how to prepare and evaluate one.
- Shows the advantages of systematic reviews over traditional reviews.
- Includes real-life case studies to illustrate the importance of this new science.

118 pages April 1995. UK £14.95; Overseas £17.00 (BMA members £13.95; £16.00).

How do you choose a particular treatment or procedure?

Do you rely on habit, an old text book you've had since medical school, or the recommendations of a colleague?

With over two million health research papers published each year it is impossible to keep up to date with the latest information, with the result that many doctors rely on outdated, sometimes lethal techniques when treating patients.

Now at last there is an alternative. The *Cochrane Database of Systematic Reviews* is a regularly updated electronic journal which will give you information on the effects of health care to help you make better choices based on reliable research evidence.

This information is based on systematic reviews carried out by a growing international network of individuals contributing to the Cochrane Collaboration.

Now available on disk and CD-ROM through the BMJ Publishing Group, these reviews will be updated twice-yearly with the latest findings and critical feedback from users, so you can be confident that the information at your fingertips is current and reliable.

This first issue contains:

51 reviews dealing with the treatment of problems in pregnancy and childbirth, subfertility, stroke, schizophrenia, and parasitic diseases. PLUS protocols and titles for 134 reviews currently in preparation on these subjects, and also on musculoskeletal disease, oral health, acute respiratory infections, and inflammatory bowel disease.

A bibliography of previously published systematic reviews.

A bibliography of methodological articles.

Information on the Cochrane Collaboration.

Available on disk and CD-ROM for IBM PC compatible and Apple Macintosh computers.
Price per subscription (2 issues):
Personal £75;
Institutional £100
including VAT.
