# Evidence-Based Medicine

*Editors: B Haynes & D Sackett*

With 2 million new papers published each year how can you be sure you read all the papers essential for your daily practice, and how can you be sure of the scientific soundness of what you do read? One answer to this dilemma is practising evidence based medicine, basing clinical decisions on the best available scientific evidence.

To meet this need the BMJ Publishing Group together with the American College of Physicians is launching a new journal - *Evidence - Based Medicine*. This new journal is a development of the ACP Journal Club.

Published bi-monthly *Evidence - Based Medicine*, will survey a wide range of international medical journals (at least 70) to identify the key research papers that are scientifically valid and relevant to practice.

**Launching in September 1995,  
*Evidence-Based Medicine* will:**

- use scientific criteria to select the abstracts from the most important papers from the world's leading journals
- select only those papers which have a direct message for practice
- provide commentaries on the abstracts which will make clear the importance of the papers
- supply educational material to teach you about evidence based medicine
- cover all medical advances that are really important
- cover internal medicine, and the major specialties, including general surgery, paediatrics, obstetrics & gynaecology, psychiatry, general practice, anaesthesiology and ophthalmology.

#### PRESCRIBING INFORMATION

**Presentations:** Pulmicort Respules (2ml single dose unit ampoules) containing 0.25mg/ml or 0.5mg/ml budesonide in a suspension for nebulisation. **Uses:** Bronchial asthma where use of a pressurised inhaler or dry powder formulation is unsatisfactory or inappropriate. **Dosage and administration:** Dosage schedules: Administer from suitable nebulisers. Dose delivered to the patient varies depending on the nebulising equipment used (see data sheet). Adjust dosage individually. Initially during periods of severe asthma and while reducing or discontinuing oral glucocorticosteroids the recommended dose in adults (including elderly and children 12 years and older) is usually 1-2mg twice daily. In very severe cases the dosage may be further increased. Children 3 months to 12 years: 0.5-1mg twice daily. The maintenance dose should be the lowest dose which keeps the patient symptom-free. Recommended doses are: Adults (including elderly and children 12 years and older): 0.5-1mg twice daily. Children (3 months to 12 years): 0.25-0.5mg twice daily. For an increased therapeutic effect increase dose of Pulmicort rather than combine treatment with oral corticosteroids because of the lower risk of systemic effects. **Contraindications, warnings, etc.:** Contraindications: Hypersensitivity to any of the constituents. Special warnings and precautions: Care is needed in patients with pulmonary tuberculosis and viral infections in the airways. A short course of oral steroids in addition to Pulmicort may be required in patients with excessive mucus in the bronchi. Transfer of patients dependent on oral steroids to Pulmicort demands special care; see data sheet for further details. The nebuliser chamber should be cleaned and dried after every administration. Pulmicort does not affect the ability to drive and use machines. Pulmicort Respules can be mixed with 0.9% saline and with solutions of terbutaline, salbutamol, sodium cromoglycate or ipratropium bromide. **Side-effects:** Mild irritation in the throat, coughing and hoarseness and oral candidiasis have been reported. In rare cases inhaled drugs may provoke bronchoconstriction in hyperreactive patients. Facial skin should be washed after use of the face mask as irritation can occur. Coughing can usually be prevented by inhaling a  $\beta_2$ -agonist (e.g. terbutaline) 5-10 minutes before inhalation of Pulmicort Respules. Avoid in pregnancy. **Pharmaceutical precautions:** Store below 30°C. Use within 3 months of opening the foil envelope. Protect opened ampoule from light. Use within 12 hours of opening. **Legal status:** POM. **Basic NHS price:** Pulmicort Respules 0.25mg/ml (20 single dose units) £32.00. Pulmicort Respules 0.5mg/ml (20 single dose units) £44.64. **Product licence nos.:** Pulmicort Respules 0.25mg/ml PL 00170309. Pulmicort Respules 0.5mg/ml PL 00170310.
